

SPL User Manual

Project "Type A"

Prerequisites

- Java 17 which can be installed from [this link](#)

Running the program

- From the root folder run `java -jar SPL.jar "path/to/input"` to run source code in the specified input file
- The generated BASIC target code will be written to `target_code.txt` as well as get outputted to the terminal
- This output can then be run using the following [online emulator](#)

Source Code

Can be found [here](#)
